

YK FOOD INFRASTRUCTURE

ASSET MAP

In 2019, the City of Yellowknife released a Food and Agriculture Strategy (GROW) to foster a resilient food system. One of the strategy's goals is to identify key infrastructure needs to support and incubate local food production within the city.

159 assets were identified

The asset map was developed to provide residents of Yellowknife an understanding of the food-based infrastructure and services found in the community and, to a lesser degree, across the Territory.

To gather information for the map, researchers conducted an online search. Stakeholders were also contacted for more details if they were identified via interviews or information was not readily available.

Assets are organized according to their role, governance structure, and type.

ROLES

Business Dev. Certification Outreach Garden Education Coordination Waste Funds Kitchen Production Restaurant Sales Small Business Transportation

GOVERNANCE STRUCTURES

Network Business NGO/Community School Government

TYPES

Service Research Program Network Funding Event/Campaign Entity

Provided in the map are each asset's description as they apply to the local food system, contact information, website, and physical location.

Visit the YK Food Asset map here:

<https://bit.ly/3mvUDJ9>

Note: some assets were placed in multiple roles, so the sum may not be equivalent to the total figure
